

Company Profile

Who We Are

With specialization in chronic diseases, OM1 is a leading real-world data and technology company leveraging big clinical data and artificial intelligence (AI) to better understand, compare, and predict patient outcomes.

What We Do

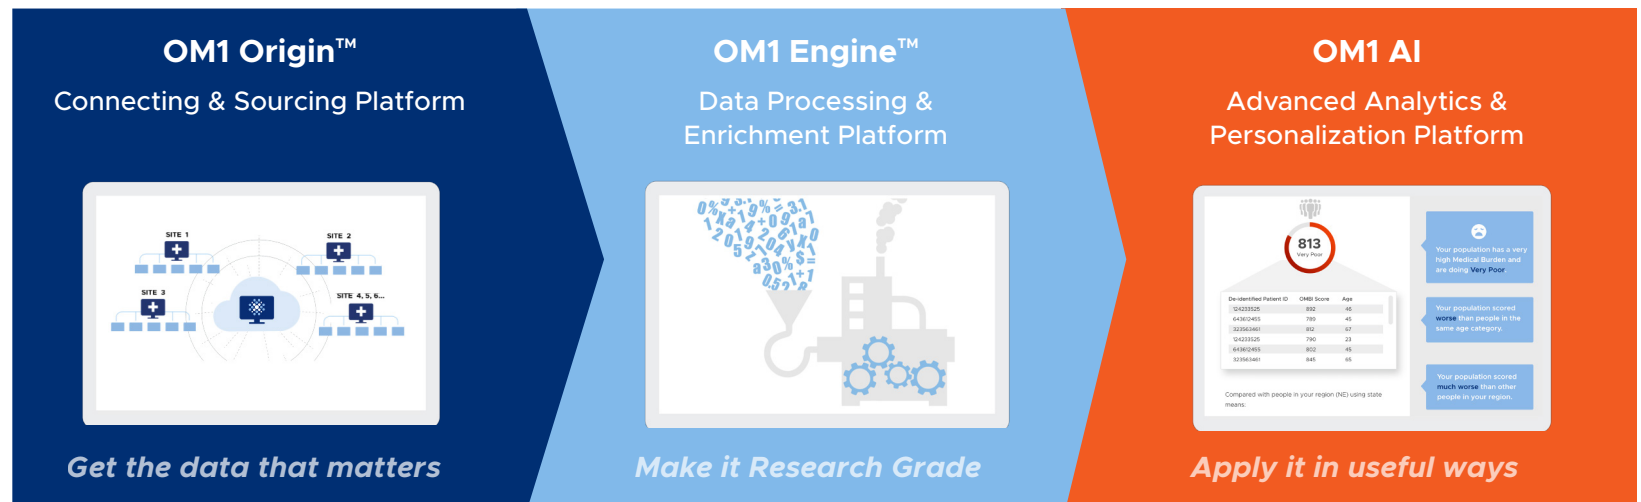

At OM1, we're focused on transforming healthcare by reimagining how it is measured and delivered. We've built the OM1 Real-World Data Cloud, with more than 300 million patients, to enable different healthcare stakeholders to cost-effectively access, analyze, and use outcomes data in a more robust, clinically meaningful, and precise way.

Based on billions of data points, our automated data networks, premium datasets, and industry-leading predictives empower healthcare stakeholders to:

- Quickly, accurately, and more cost effectively get to research-grade data and analytics
- Support FDA submissions for new drug approvals, label expansion, and post-market commitments
- Measure and predict more precise care with cutting-edge modeling

How We Do It

OUR TECHNOLOGY MAKES THE DIFFERENCE

Company Profile

How We Work With Clients

Data Licenses

License our condition datasets

Automated Data Networks & Registries

Conduct prospective & retrospective studies using our networks or build a custom network

Advanced Analytics

Leverage our experts for your analytic questions or studies

Precision Modeling

Use models to target the right patient populations and optimize outcomes

OM1 Real-World Data

OM1 SPECIALTY DATA

- Mental Health & Neuroscience
- Cardiometabolic
- Dermatology
- Gastroenterology
- Musculoskeletal
- Respiratory/ENT
- Rheumatology

CUSTOM DATA COHORTS

- Oncology
- Rare Diseases

Let's Partner for Success

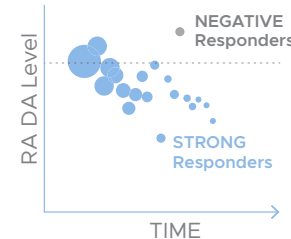

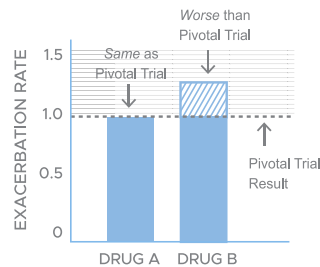

OM1 DATA SOLUTIONS

- Predict Likely Responders for Trials
- Target Drug Discovery using better Information Sub Cohorts
- Find New Indications in RWD
- Forecast product use
- Understand Market Needs, Burden of Disease

- Fulfill Postmarketing Commitments
- Continuously Understand Value and Effectiveness
- Understand and Predict Provider Patterns

- Select Likely Responders for Trials
- Earlier Diagnosis using ML and Deep Learning
- Monitor against Competitive Products
